DESIGN THINKING

“Design Thinking is a human-centered approach to innovation.”

TIM BROWN
IDEO

O DT focuses on solution in the crossing or interaction of what is desirable, feasible and viable

What is Design Thinking?

Methodology for generating innovation and solving problems, based on the discovery and in-depth knowledge of user needs

Innovation through Design Thinking

- Design thinking produces solutions with the user and their context always in mind
- Design thinking is a proven and repeatable problem-solving methodology that anyone can employ
- Design thinking is called "design thinking" because it represents how designers go about solving problems.
- While you do not need to be an artist or a designer to do design thinking, design thinking can benefit from visual techniques such as sketching and storyboarding.

Innovation through Design Thinking

Design thinking is a user-centered, creative, and collaborative problem-solving methodology.

- A problem might require many different types of expertise to solve, and many iterations to target the best solution
- Teams practicing design thinking are more powerful when members have a diverse set of perspectives and areas of expertise.
- Design thinking requires that all members understand user research to uncover the real needs and desires of the target market.
- Design thinking requires that you place the needs of the user and your understanding of their problem at the center of your work. Then, grounded in research and fueled by creativity, teams come up with ideas, create models of those ideas, and critique those ideas in a cycle of iteration that moves toward a solution.

WHEN CAN WE USE DT?

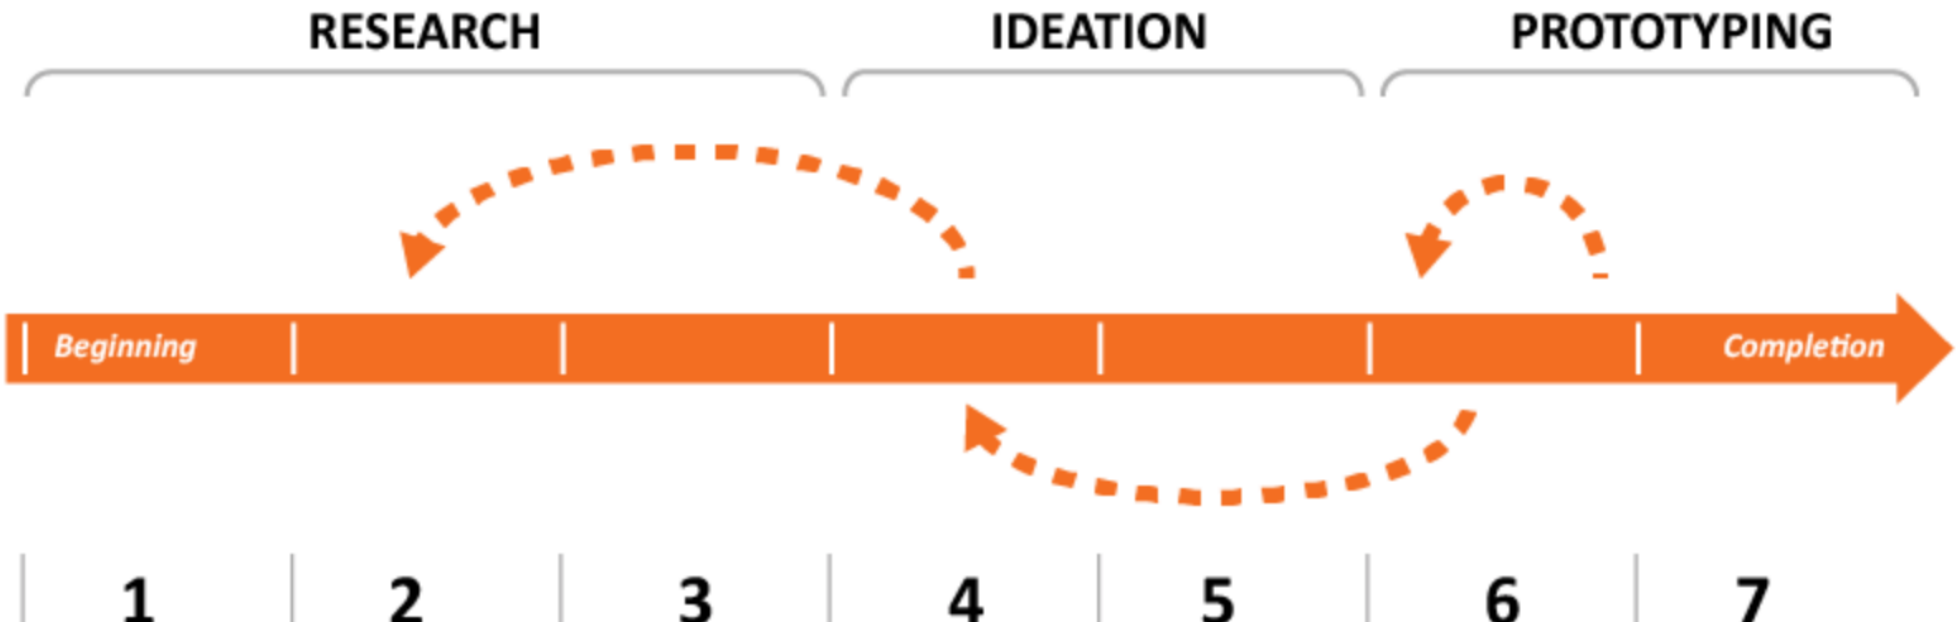

- To solve complex problems
- To build empathy
- To solve problems in a collaborative way
- To balance needs, wishes with financial and technologic viability
- To build social impact
- To accelerate innovation
- To solve real society problems
- To understand real needs
- To decrease the innovation process risks

- To create innovated products and services
- To build social innovation
- To transform cultural organizations
- To transform business
- To create new business models
- To rethink in strategies and institutions
- To redesign process
- To develop a brand
- To rethink a space
- To create a new technology
- To Design public policy

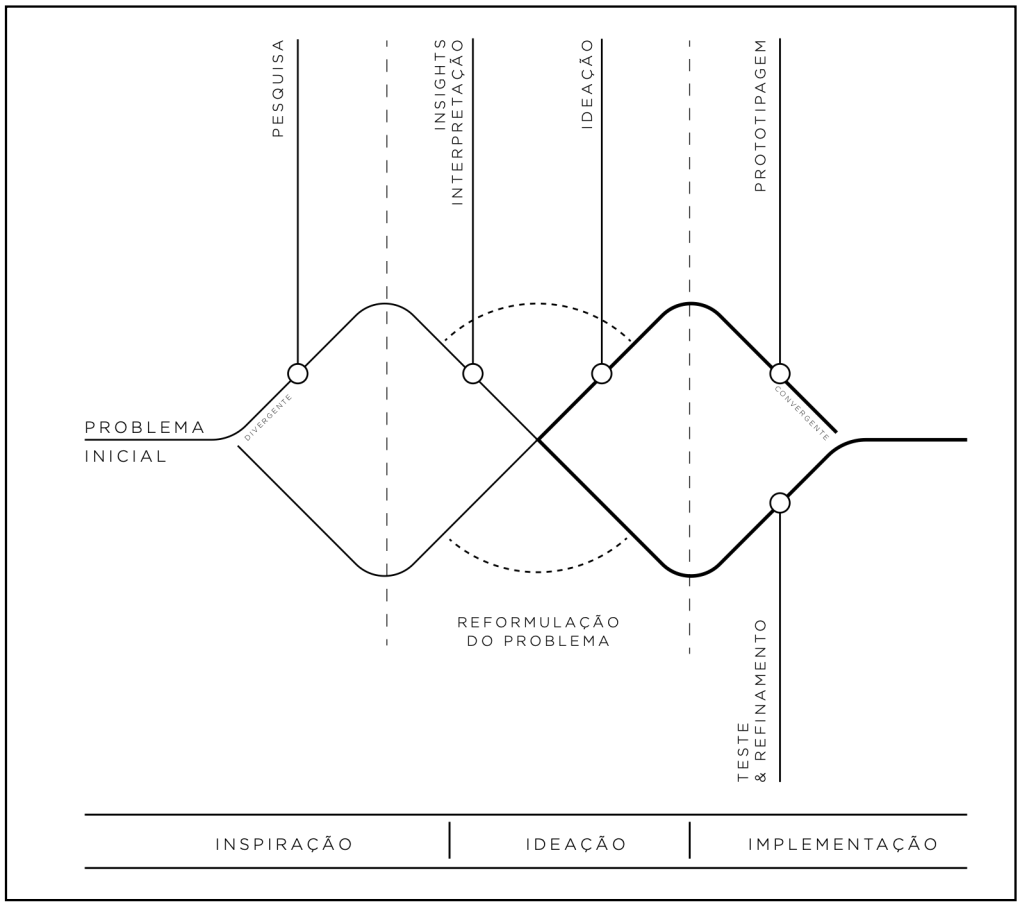

Design Thinking Process

- Inspiration
- Ideation
- Implementation

- Design Thinking is a methodological approach. Design is a discipline

Empathize

Understanding users and their contexts

DEFINE

the needs and problems of users

IDEATE

Challenge assumptions and generate ideas

PROTOTIPE

FAIL EARLY AND OFTEN
TO SUCCEED SOONER

TEST

Iterate and incorporate user feedback

Design Thinking Projects – The problem

How can we encourage youth (aged 14 - 18) to participate and intervene in urban mobility solutions?
